

About adding new content for your Live app, you can use Resource Sync feature created by our developers.

Once your application is Ready For Sale in the App Store you will have possibility to synchronize resources (images, sounds, html files, etc.) with app without releasing a new app version. To choose what files do you want to be sync go to your app's Dashboard -> Edit Pages -> Resource Manager.

The check-box on the far right of the appeared table represents the sync feature state of the file (pages).

When user taps REFRESH button in the top left corner a panel appears. Selecting Sync will update files from the server.

Note: sync option is enabled by default for app.xml.

Note: just files set as SYNC in Resource Manager will be updated.

If sync feature is not needed you can disable it in the Submission Process.

App Version Settings

Please specify a build version. If this is a first time submission version should be 1.0. Every subsequent update should have an increased build version (Ex: 1.0, 1.1, 1.2 etc). Please check the last build version in iTunes and increase it with 0.1 .

Build Version:

Application Name:

Please specify an application name (or Product Name). Application name is displayed under application icon on the device. **YourApplication** must be a short name to fit icon width.

- Enable Sync (resource synchronization of files selected in the Resource Manager allows to update them without necessity to publish an update for the app, enabled by default).
- Enable Sync Button (allows manual synchronization of app resources).
- Enable Info Button ⓘ (shows app information such as author name, etc.).
- Enable App Autorotation (app will rotate between portrait and landscape mode when device orientation changes, disabled by default).
- Enable Audio Background Mode (allows audio playback in the background, disabled by default).
- Enable Shine Effect (iOS will add standard gloss effect to your application icon, enabled by default)
